Trina AX

AI that works with your company files

Your company's own AI workspace

Claude runs on your company's server.
Your team asks for what they need in plain words.

An everyday task

"Turn the Sales meeting notes into an Excel table of tasks, owners and deadlines."

Read company files → Organize tasks → Save as Excel

The AI opens only the files the person asking can read. Write, search and organize from the web, desktop or phone.

All companies, people, files and results in these examples are fictional.

Permissions checked first

Same question, different answers

“Summarize the first-half performance reviews.”

Hajun · HR

Can read the HR folder

24 people were reviewed; 2 rated S. Here are the results by team.

Joon · Sales

Cannot read the HR folder

There are no performance reviews in the folders you can open. Ask HR if you need them.

A check before sharing more widely

If the AI reads restricted material and tries to save it where more people can see it, the server asks first. A person decides whether to allow it.

A record of file access, not conversations

Admins can see which files the AI read and wrote. The app has no screen for opening someone else’s chats.

People with administrator access to the server can access stored files and chats. On Trina hosting, that includes Trina’s operators.

Start with everyday work

What each role hands to the AI

CEO

Every Monday at 9, write a weekly report from last week's changes in Sales and Finance. Save a new Word file in my folder and include the source files.

Example result · weekly-report-oct-w4.docx

Sales

Draft an Excel quote for B Corp. using the columns and items in the A Corp. quote and our current price sheet. 120 units, delivery by November 20.

Example result · B-Corp-quote-2026-10.xlsx

Finance

Merge the three Q3 company-card spreadsheets and group them by team and category. Check the receipt records, and mark missing and unknown receipts separately.

Example result · Q3-company-card.xlsx

People

Read the official letter from the Ministry of Employment (it is a Hangul file), tell me what we have to do, and draft our reply.

Example result · reply-ministry-2026-10.docx

Turn a useful workflow into a team skill

Select **Suggest as skill** below an answer. Once a person who manages the folder reviews and registers it, teammates with access can select it with **/** in chat.

Check results against the sources. Excel output uses new tables; it does not copy workbook formatting or formulas. Hangul files can be read; reply drafts are saved as Word.

Choose who runs the server

Two ways to start

Both use the same software. Employees sign in at your company address.

Hosted by Trina

- Choose a first task on a 30-minute call.
- Trina prepares your dedicated AWS server in Seoul and company address.
- Set folder permissions and invite employees.

Trina handles setup, updates, backups and monitoring.

Install it yourself

- Prepare an office Mac mini or your own server.
- Follow the installation guide.
- Set folder permissions and invite employees.

The software is free. You need someone who can manage a server.

Your first-week checklist

Folder permissions → AI connection → Invitations → First team skill → First backup

AI usage is separate from hosting

An admin connects the company's AI account once, and the whole team can work with it. Anyone who adds their own connection uses theirs first. You can also use a company API key with monthly limits per person. Each AI provider's plan terms apply. AI usage is billed separately from hosting. The owner adds team connections and creates backups.

Open source, so you can check

Trina AX is open source under AGPL-3.0. Your IT lead can review the code. If you stop hosting, you can take your files and keep using the same software on your own server.

For your buying decision

Your own server, with operation included

Starter

$39 / month

Approx. ₩52,000 · excl. VAT

Up to 5 people · 4 GB memory
80 GB storage

Team

$69 / month

Approx. ₩92,000 · excl. VAT

Up to 15 people · 8 GB memory
160 GB storage

Business

$129 / month

Approx. ₩171,000 · excl. VAT

Up to 40 people · 16 GB memory
320 GB storage

KRW reference: 2026-10-28, rounded to the nearest thousand. Source: ExchangeRate-API. Billing is in USD. AI usage and taxes are separate. For more than 40 people, ask for a quote.

Understand the security boundaries

Files and chats stay on your company server. Content needed for an answer goes to Anthropic, or OpenAI when using Codex. Training use follows your AI plan's terms. We hold no security certification yet.

Talk through setup and pricing

Tell us your team size, first task and hosting preference. Ask us about KRW contracts and Korean tax invoices if you need them.
